

MESSAGE QUEUE RESULTS**Data Requests:****File Requests:**

FIFO RESULTS

Data Requests:

File Requests:

Conclusions:

- Max number of threads allowed in FIFO = 2000
- Max number of threads allowed in message queue = 127
- Message Queue outperforms FIFO in optimal conditions
- Increasing the number of threads improves the performance of message queue but worsens it for FIFO because of race conditions
- No Race Condition problems occur in message queue
- Cleaning activity for FIFO is done by sending quit messages for each channel that was created
- Cleaning activity for message queue is done by removing it from the kernel using unlink or close function
